Welcome Message

On behalf of The University of Hong Kong, a very warm welcome to the participants of the 9th Hong Kong International Nursing Forum *cum* 1st Greater Bay Area Nursing Conference.

I am pleased to see the event being jointly organised by the School of Nursing of The University of Hong Kong and The University of Hong Kong – Shenzhen Hospital (HKU-SZH). My thanks to our colleagues from HKU-SZH, and to colleagues from our co-organiser universities and institutes from around the world, for the support.

The Forum will bring together international and local leading authorities in nursing research, nursing education and clinical practice to exchange knowledge and insights about the latest developments in the discipline, while also providing a platform to establish networks and partnerships with peers and colleagues. By exploring the future of nursing through specialisation within the discipline, the Forum aims to ultimately improve the health outcomes and the quality of care nurses provide.

Furthermore, as the inaugural Greater Bay Area Nursing Conference, the Forum is a visionary and timely occasion to explore the opportunities and potential for nursing research, education and clinical practice in the region.

My congratulations to the organisers of the Forum on what I am sure will be a productive and successful event.

Professor Xiang Zhang

President and Vice-Chancellor
The University of Hong Kong

Welcome Message

Nursing, like every other area in health care, has become more technology-enabled, more advanced and more complex. Nurses today are required to undertake a much broader repertoire of competencies while being ever the caring professional to their patients – needs which themselves are becoming more complex as we improve our understanding of health. Increasing specialisation within nursing (and medicine in general) has become necessary to ensure trained professionals can keep abreast of these trends. It is therefore most fitting that this year's conference focuses on the theme of specialisation.

Specialisation applies to all aspects of nursing – from nursing education to patient care to public health. As a public health practitioner and frontline clinician, I am deeply appreciative of the role that nurses play at the clinical interface caring for, educating and interacting with patients, and observing the influence of lifestyle factors that have health impacts. These observations have inspired important research and community programmes here at HKU, such as the longstanding work on tobacco control by Hong Kong's Secretary for Food and Health, Professor Sophia Chan Siu-chee, during her stewardship of our School of Nursing.

Hong Kong has embraced nursing specialisation only relatively recently. Last year, in April 2018, the government invited the Nursing Council to formulate a voluntary scheme on advanced/specialised nursing practice and move towards a registration system. At HKU, we offer the Master of Nursing programme, with tracks aligned with the specialisation trend to ensure nurses can serve patients' needs and keep pace with rapid changes in health care. Hong Kong therefore has a growing cohort of competent nurse specialists. Events like this year's conference will further encourage their efforts.

The conference is also playing an important regional role by embracing the Greater Bay Area. There are many exciting developments in the health care arena in the GBA that I am sure will be of deep interest today and in future conferences.

I wish all of you a productive and enjoyable conference.

Professor Gabriel Leung

Dean of Medicine

Welcome Message

It is my great pleasure to welcome all attendees to the 9th Hong Kong International Nursing Forum *cum* 1st Greater Bay Area Nursing Conference at The University of Hong Kong-Shenzhen Hospital, next to the mangroves of Shenzhen Bay.

I wish to convey my appreciation to the 9th Hong Kong International Nursing Forum *cum* 1st Greater Bay Area Nursing Conference committee. The Forum aims to promote nursing at all levels through discussions among Chinese and international experts on research, education and nursing practice. Enabled by this unique Shenzhen-Hong Kong cooperative platform, nursing specialists from Shenzhen, Hong Kong and around the world will share their opinions and ideas about the development of nursing. It is no doubt a grand event of great historical significance.

Geographically, Shenzhen and Hong Kong are close to each other and have long-established relationships in many aspects. The University of Hong Kong – Shenzhen Hospital typifies the cooperative endeavours possible between the two cities. Since the founding of the hospital seven years ago, we have pioneered many initiatives in public hospital reform and established numerous key milestones in the history of medical cooperation between Shenzhen and Hong Kong. We are proud of our 1,300-staff nursing team who recently received the 2019 Asian Hospital Management Awards – Nursing Excellence Award.

I wish all attendees a fruitful experience and our guests from overseas an enjoyable stay in Shenzhen. I am certain that the cooperation in health and medical care will further deepen and widen the opportunities for partnership between Shenzhen and Hong Kong.
